

Input RGB Image

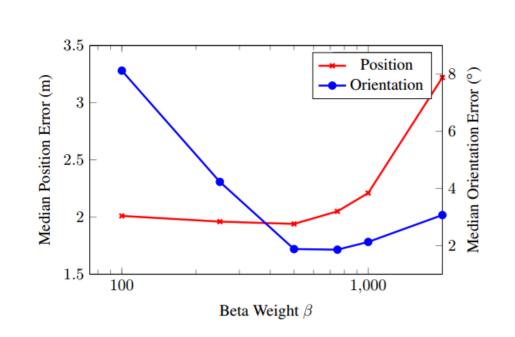

Convolutional Neural Network (GoogLeNet)

## PoseNet

- $\checkmark$  Robust to lighting, weather, dynamic objects learns features based on shape, appearance and global context
- $\checkmark$  Fast inference, <2ms per image on Titan GPU
- ✓ Scale not dependent on number of training images
- ✓ Trained with a naïve end-to-end loss function to regress camera position, **x**, and orientation, **q**;

$$\log x = \|x - \hat{x}\|_{2} + \beta \left\| q - \frac{\hat{q}}{\|\hat{q}\|} \right\|_{2}$$

- X Relocalization accuracy of 2m, 5° over scene of  $50,000m^2...$ we can do better?
- **X** How do we weight position, q, and orientation, x, losses?

## Geometric Loss Functions for Camera Pose Regression with Deep Learning Alex Kendall and Roberto Cipolla, University of Cambridge Webdemo: http://mi.eng.cam.ac.uk/projects/relocalisation @alexgkendall

6-DOF Camera Pose

- $\succ$  Use reprojection function,  $\pi$ , and train on reprojection of 3D geometry in 2D image space
- Using ideas of bundle adjustment as a differentiable training loss
- $\succ$  No calibration, we can use arbitrary camera intrinsics

$$loss = \frac{1}{|\mathcal{G}'|} \sum_{g_i \in \mathcal{G}'} ||\pi(\mathbf{x}, \mathbf{q}, \mathbf{g}_i) - \mathbf{g}_i ||\mathbf{g}_i \in \mathcal{G}'||\mathbf{g}_i \in \mathcal{G}'||\mathbf{g}$$

What if we don't have geometry?

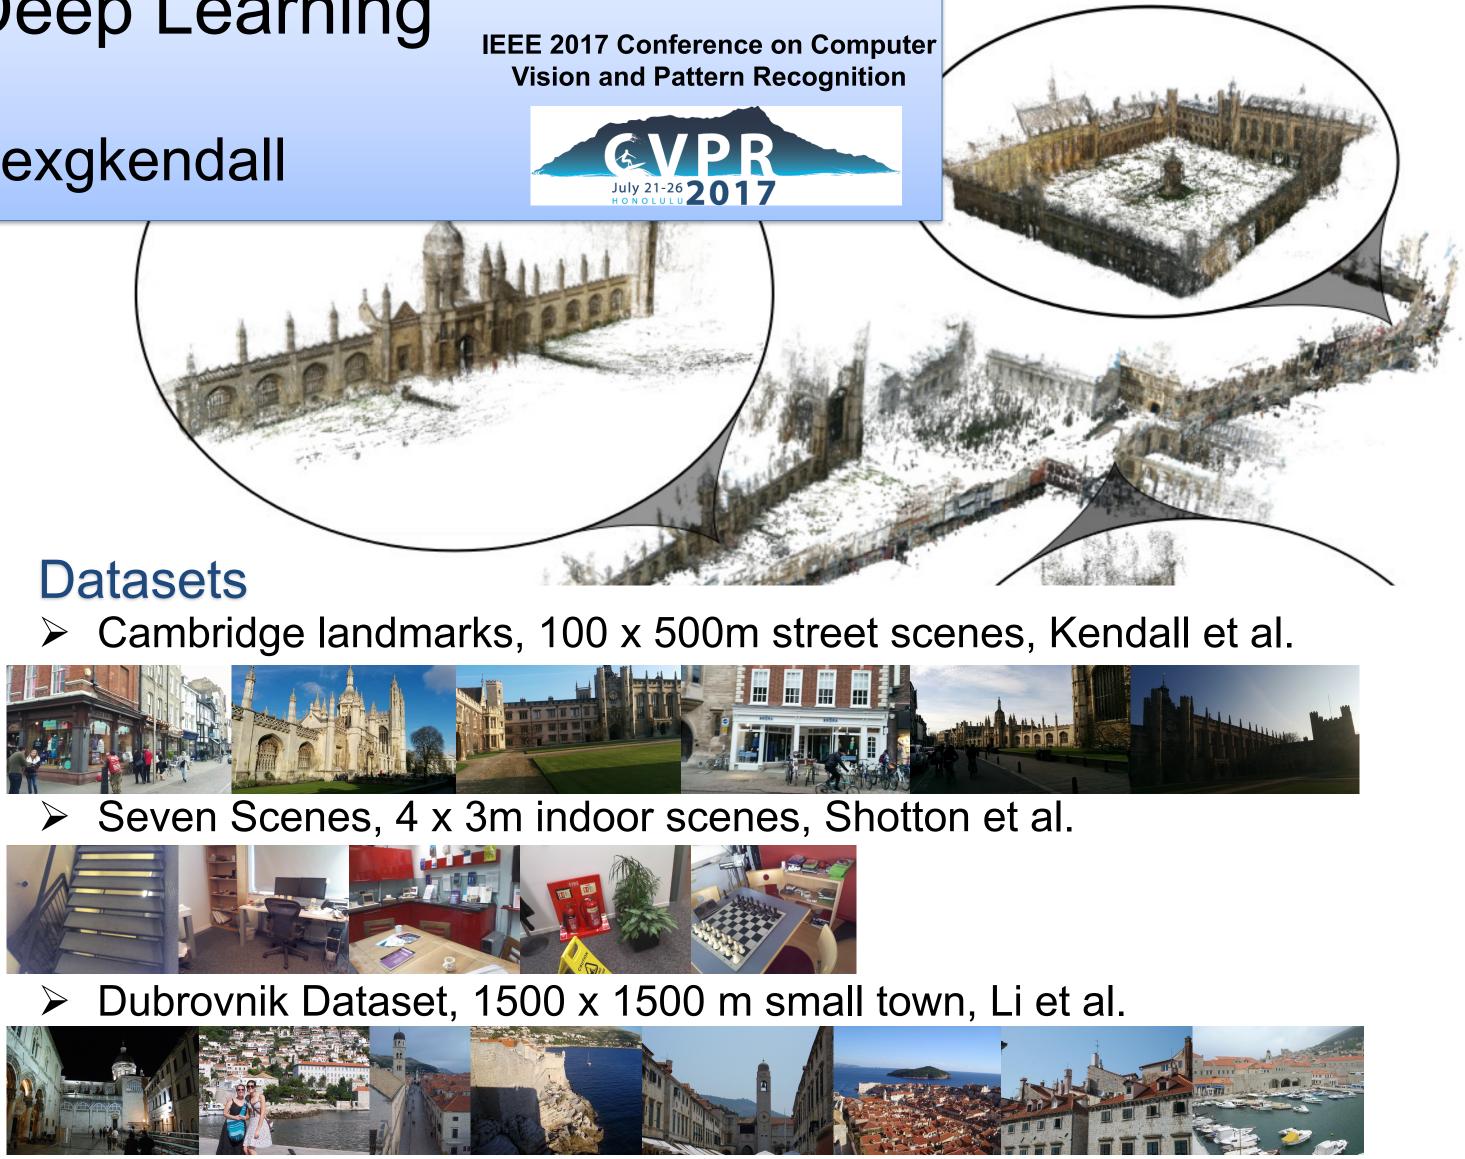

- $\succ$  What can we do if we don't have 3D geometry, e.g. SFM model, RGB-D data
- > We can use task-dependent (homoscedastic) uncertainty to weight position and orientation

$$\log = \frac{\|x - \hat{x}\|_2}{\sigma_x^2} + \log \sigma_x^2 + \frac{\|q - \hat{q}/\|\hat{q}\|\|_2}{\sigma_q^2} + \log \sigma_q^2$$

### Performance

Cambridge Landmarks, King's College				Dubrov	nik 6K	
	Median Error		Accuracy	Median Error		Accuracy
Loss function	x[m]	q[°]	< 2m,5°	x[m]	q[°]	< 2m,5°
Linear sum, $\beta = 500$	1.52	1.19	65%	13.1	4.68	30.1%
Learn weighting with task uncertainty	0.99	1.06	85.3%	9.88	4.73	41.7%
<b>Reprojection</b> loss	does not converge					
Learn weighting pretrain + Reprojection loss	0.88	1.04	90.3%	7.90	4.40	48.6%
SIFT + SfM Geometry	0.42	0.55	_	1.1	_	_

 $-\pi(\widehat{\boldsymbol{x}},\widehat{\boldsymbol{q}},\boldsymbol{g}_i)\|_1$ 

# Future Work:

- City-scale metric localisation
- augmented reality
